

Hoschton Animal Hospital Pre-Anesthetic Blood Testing Consent Form

Like you, our greatest concern is the well-being of your pet. Before putting your pet under anesthesia, we will perform a full physical examination and a blood analysis. Blood chemistry tests give us an inside look at your pet's vital organs and let us know if they are functioning normally. Such tests are especially important before any kind of surgery.

Our laboratory is fully equipped and staffed to perform these important tests. Results will be available immediately to review before anesthesia.

Please indicate your choice below:

_____ **Pets under 6 years of age \$ _____**
(6 Chemistry Panel-ALKP, ALT, BUN, CREA, GLU, TP)
Assures proper kidney and liver function.

_____ **Pets 6 years of age and over \$ _____**
(12 Chemistry Panel-ALB, ALKP, ALT, TBIL, TP, PHOS,
BUN, CREA, AMYL, CHOL, GLU, CA)

An aging pet's organs will gradually deteriorate, and may lose their ability to function properly. Routine preventive testing for early detection allows us to help your pet live a longer, healthier, happier life. These tests give us a look at your pet's overall health status, from liver function to cholesterol levels.

_____ **I prefer not to have any blood chemistry tests performed.**
